PROFILE SUMMARY

Data Analyst with a background in Artificial Intelligence & Data Analytics and hands-on experience in data analysis, data cleaning and data reporting using SQL, Advanced Excel, Python, and Power BI through internship, projects, and an ongoing Data Science program. Skilled in writing optimized SQL queries, performing and creating dashboards to support data-driven insights and business decision-making.

EDUCATION

Bachelor of Computer Applications (Artificial Intelligence & Data Analytics) **CGPA: 6.89**
LNCT University 2022 - 2025

Higher Secondary School **CGPA: 7.85**
12th | Aryan's Public School 2022 - 2025

PROFESSIONAL EXPERIENCE

WATT Incorporate | Data Analyst Intern **Jan – April 2025**

- Cleaned and organized business inventory datasets using SQL and Advanced Excel.
- Prepared structured datasets for analysis and reporting, which improved data usability by ***30–40%***.
- Performed exploratory data analysis to identify trends, patterns, and key performance indicators. Generated insights that supported business decision-making and improved the understanding of sales and operational data.
- Designed and developed KPI-based dashboards using Power BI and Excel to visualize key metrics and trends. Automated reporting processes and reduced manual reporting effort by ***40%***, enabling faster analysis and reporting also assisted in preparing reports and visualizations to present insights in a clear and professional format.

PROFESSIONAL COURSE

Master's in Data Analytics & Data Science **Ongoing**
I.T. Vedant Education Pvt. Ltd. 2025 - Present

TECHNICAL SKILLS

Programming Language: SQL, Basic Python (Pandas, NumPy, Matplotlib, Seaborn)
Databases: MySQL
Data Visualization: Power BI, Tableau.
Data Analysis: Advanced Excel, Data Cleaning, Data Analysis, Data Visualization, Report Creation.
Data Visualization: Power BI, Tableau.

PROJECTS

E-Commerce Sales Analytics Dashboard
Technology**:** SQL | MySQL | Power BI | Advanced Excel
Objective:
To design a database-driven system and analyze sales and customer data for business insights.
Method:

- Created relational tables and used SQL queries (JOIN, GROUP BY) to analyze trends.
- Built KPIs and dashboards using Power BI and Excel.

Outcome:

- Identified top-selling products and high-value customers.
- Reduced manual reporting effort by ***40%***.

COVID-19 Global Impact Analysis Dashboard
Technology: Power BI, DAX, Data Modeling, Data Visualization
Objective:
To analyze global COVID-19 trends, including confirmed cases, deaths, and recovery rates.
Method:

- Cleaned and integrated datasets and created a structured data model.
- Built DAX measures and interactive dashboards with KPIs and trend charts.

Outcome:

- Provided insights on global trends and regional comparisons through interactive reporting.

Retail Sales Performance Analytics Dashboard
Technology: Power BI | SQL | Advanced Excel | DAX
Objective:
To analyze sales performance and identify key trends for better business decisions.
Method:

- Cleaned and transformed sales data and created a data model.
- Developed KPIs and an interactive dashboard with slicers and filters.

Outcome:

- Identified top-performing categories and sales trends.
- Improved reporting efficiency by ***50%***.

CERTIFICATIONS

- Tableau
- Power BI for Visualization
- SQL for Data Analysis
- Advanced Excel
